

Deanship of Information & Communications Technology (DICT) is pleased to announce the launch of the 'Campus-wide Wireless Service'. It is now offering wireless connection in most of the buildings across the campus. This service provides UOD community the convenience and flexibility of using portable computing devices at non-traditional locations around campus.

There are two Wireless Networks available for use that serve different functions:

1 UOD employee:

This network requires you to authenticate by entering in your UOD User Name and Password. By connecting to this wireless network you can reach the outside Internet and all on campus services.

2 UOD student:

This network requires you to authenticate by entering in your UOD User Name and Password. By connecting to this wireless network you can reach the outside Internet and all on campus services.

3 Guest:

If you are a guest on UOD's campus you may connect to the UOD Guest network and complete an online form and have a temporary user name and password sent to you via text message.

Using Wireless

During the first phase, users may experience some limitations due to many different factors. These include user population, proximity to the wireless access point, interference, wireless protocols, user device hardware and software etc. Due to this, users may experience variable performance. Also access may not be available to some of the HTTPs websites and applications such as WhatsApp.

The Deanship is working on numerous projects to enhance the user experience and accessibility through wireless.

SSIDs: UoD-Employee and UoD-Student

1 Android-based

- From you mobile or tablet device just you can select the WLAN "UoD-Employee" or "UoD-Student" from the discovered list, you will see the following screen

- So simply, fill in the following:

1. **Identity:** Domain username like: masaleh
2. Leave the **anonymous** field blank
3. **Password:** domain password

2 IOS -based

- Fill in the domain username and password .

- After submitting the credentials, you get the following screen to accept the certificate for secure connection. So click Accept.

3 Laptop/desktop Access

A- Connect to the WLAN "UoD-Employee" or "UoD-Student"

B- After clicking on WLAN, the user should submit his login credentials username/password

C- The following screen could be appearing to confirm the secure connection and the accepting of incoming certificate. So the user should press "connect" as per below.

SSIDs : Guest

This open SSID can be accessed from either mobile or PC or any kind of wireless client without any prior configuration on the client

1

Once the user type any URL it will be redirected to a web authentication page . For the first time, the guest should register himself by clicking 'New User'. The guest interface is available in Arabic and English .

2

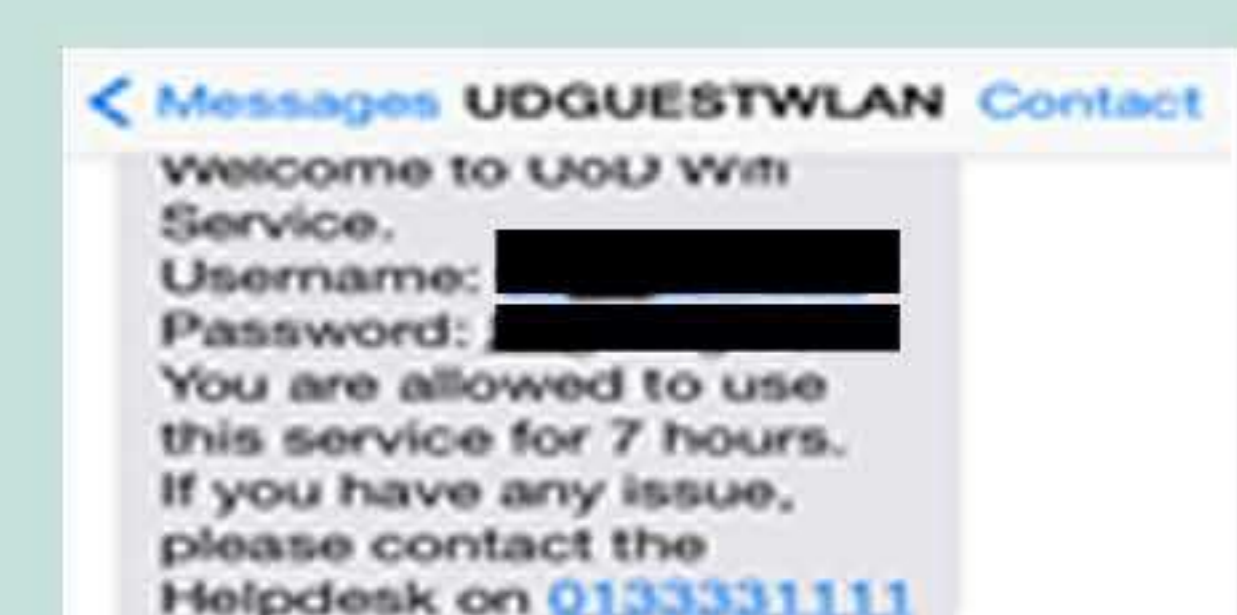

The guest can create a new user by entering a first name, last name and his mobile. The guest will receive his access login credentials via SMS.

3

The SMS recived contains the username and password

4

Then he should get the following message indicating successful registration, and he will be allowed to use the guest service for 4 hours starting from receiving the SMS that contains the login credentials

5

Then the user should submit the received logins in the proper fields as below, and he can surf the internet smoothly after successful login .

6
