### Brief Description of Undergraduate Courses Taught: (Course Title – Code: Description)

1. CLPH-507:

Course Description:

Research methods (research process, scales of measurement, accuracy of data, validity and reliability, research design (objective, literature review, sampling, types of design), clinical trial design (controlled multi-centered studies, random allocation (randomization), study types, blindness, placebo effect, retrospective and case studies, data collection forms), individual variation, biostatistics (statistical terminology, errors of sampling, probability concepts, distribution of random variables, non-parametric methods, validity of results, analysis of variance and tests for significance, choice of proper tests for significance, statistical methods applied to biological assays and proper experimental design), introduction to SPSS and other statistics computer programs, and scientific writing.

2. CLPH-512:

Course Description:

In the first half the course, it will be explained the importance of pharmacoepidemiology, basic terminology used in pharmacoepidemiology research, and the data sources, study designs, and statistical analyses often employed in pharmacoepidemiology research. The course will further cover detailed descriptions of the use of pharmacoepidemiology to understand medication utilization and medication safety issues. Finally, the course will discuss the perspective of the FDA on medication safety, the importance of health care professionals to the process of improving medication safety, and the ways in which pharmacoepidemiology will be a key component of future medication safety initiatives.
