Brief Description of Undergraduate Courses Taught: (Course Title - Code: Description)

Description	Code	Course Title	م
The course explains the concept of organizing information and is	LIBR202N	Foundations of information	
known as the principles of selecting and drafting subject headings,		organization	
and how to use the brochures and lists of subject headers of all kinds.			
It also provides the student with information and knowledge related			
to the process of indexing and abstraction, both theoretical and			1
applied, and their role in organizing and retrieving information. And			.1
provide the student with practical skill in the practice of indexing and			
extraction related to the preparation and evaluation of indexes and			
abstracts, and invest the potential of new technologies in this area.			
Identify and evaluate sources of traditional and electronic	LIBR204N	Sources of information	.2
information used in libraries and information centers.			.2
		Retrieval information	
Understanding and understanding of the concept of information			2
retrieval and training in searching databases, online and CD-ROMs,			.3
on the web and training in concepts and strategies of automatic			

(Identification of the needs of the beneficiary / Appropriate information / carry out research assignments on some issues and developments related to information retrieval systems. Design of an automated retrieval system. Training on means of evaluating the performance of automated information retrieval systems. Practical applications on terminology linking techniques and field restriction techniques, Intention to deal with stop words Evaluation of storage and retrieval systems according to the evaluation criteria used The course deals with the concept of information resource development, the basics of developing information resources, the study of the community of beneficiaries, the policy of development of information sources: selection and supply, group evaluation and refinement, collaborative supply and online provisioning. Definition of direct and indirect services provided by libraries and learning resource centers The course deals with the meaning and concept of LRCs and their importance in the educational process in the light of technological and informational developments and their impact on learning methods through the definition of their tasks, services and .requirements Information management of institutions course recognize the student on management of institutions course recognize the student with his hands drafting of decisions through the study of the training exercises (case studies) as well as the ability to work with a team and learn communication skills. Identify and evaluate sources of traditional and electronic information for children and young people used in libraries and .information centers Field training is an integral part of the academic program. The course focuses on providing students with practical experience in various fields of specialization through working for a specific period in a governmental or private information services institution. The duration of the field training is a full semester (4 working hours, during the week throughout the semester). The student shall	search, plans, methods, and commands used in the search operations			
developments related to information retrieval systems Design of an automated retrieval system. Training on means of evaluating the performance of automated information retrieval systems. Practical applications on terminology linking techniques and field restriction techniques, Intention to deal with stop words Evaluation of storage and retrieval systems according to the evaluation criteria used. The course deals with the concept of information resources development, the basics of developing information resources, the study of the community of beneficiaries, the policy of development of information sources: selection and supply, group evaluation and refinement, collaborative supply and online provisioning. Definition of direct and indirect services provided by libraries and learning resource centers. The course deals with the meaning and concept of LRCs and their importance in the educational process in the light of technological and informational developments and their impact on learning methods through the definition of their tasks, services and surces. Information management of institutions course recognize the student to management of institutions course recognize the student to management of the experiments and how to prepare the budget and the ability, and the application of rules and principles of comprehensive quality management, and as you know the student with his hands drafting of decisions through the study of the training exercises (case studies) as well as the ability to work with a team and learn communication skills. Identify and evaluate sources of traditional and electronic information for children and young people used in libraries and information centers. Field training is an integral part of the academic program. The course focuses on providing students with practical experience in various fields of specialization through working for a specific period in a governmental or private information services institution.
