## TYPES OF CURATIVE SURGERIES FOR COLORECTAL CANCER

1

### **Surgery of primary tumor:**

**In any resectable primary tumor with no metastasis or resectable distant metastases**

**Complete resection with clear margins is associated with the best prognosis.**

2

### **resection of metastases:**

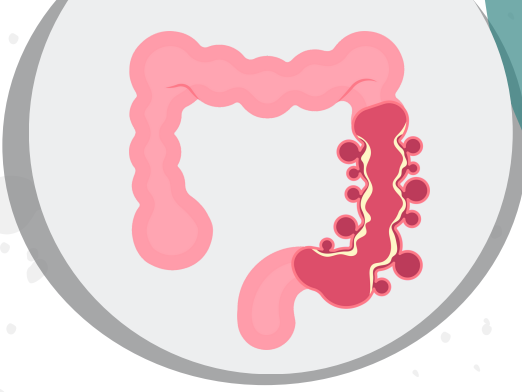

Indicated in patients with resectable metastases (e.g., liver and/or lung metastasis)

May significantly improve the survival of patients with limited metastatic disease.

3

### **lymph node dissection:**

Performed routinely alongside resection of the primary tumor.

## Surgical interventions

Indications	Type of procedure for colon cancer
Tumor in the cecum and ascending colon	Right hemicolectomy
Tumor in the descending colon	Left hemicolectomy
Tumor in the sigmoid colon	Sigmoid colectomy
Multifocal carcinomas Underlying colonic disease	Subtotal or total abdominal colectomy
Tumor near the hepatic flexure or in the proximal or middle transverse colon	Extended right hemicolectomy
