Agenda of the meeting of the Advisory Committee of the Chemistry Program

1. Review the mission, goals and objectives of the program and their performance indicators.
2. Review the graduates characteristics, the learning outcomes of the program and their compatibility with the national qualifications framework, and then go through the needs of the labor market and its reflection in the program study plan.
3. Review the curriculum study plan that composed of required and elective courses for both tracks. Then, discuss how we can find solutions to the non-enrollment of students in the chemistry track.
4. Review the teaching strategies and assessment methods considering the new scientific and technological changes of strategies locally, regionally and globally.
5. Review the program performance indicators and discuss how to improve the low indicators.
6. Review and evaluate the field experience and learning outcomes in line with current and future labor market needs.
7. Discuss the development of scientific research plans and seek to guide them to serve the specialty and society and the establishment of research partnerships to finance and marketing research production.
8. Discuss the community service plan and agreements with community institutions to establish voluntary work projects to serve the community.
