12. Climate related Courses offered by IAU for Student Community	61
13. Green Building Implementation at IAU	63

1. Introduction

IAU always takes initiatives to reduce the impact on climate change. IAU promotes the staff and students to plant trees inside the campus, this planted tree can be tracked in an app by name "Nabatik".

IAU understands that the students will be persuaded to new technological advancements and new initiatives, which was rightly used by IAU to motivate students for plantation of trees and thereby saving the nature.

As part of the sustainability measures taken by IAU, solar panels are installed, water recycling and reusing recycled water to plants and washrooms are already in place and functioning well.

IAU takes seriously about conservation of natural resources and motivating the staff and students to keep the environment without harming them so that the future generations can be benefitted from it.

As an initiative to save the climate, at present only solar energy is used only for campus lights and signage in main campus. The mega project is in pipeline to install solar panels in all the campuses of the university to have an alternate source of energy, which will help to be less dependent on electricity and reduced the electricity consumption, and hence save the climate.

All buildings of the IAU Campus fulfil the requirements of the Saudi Building Code which is the National Standard for construction of buildings which support Green Building Implementation. Many of our building also follow the international building standard code, which is reflected in all the constructed buildings of IAU.

2. Creating Awareness on Energy Efficiency among IAU Students and Employees

IAU has Energy Efficiency Screen Saver (Both in English and Arabic Languages) at all Computer Desktops used by its employees to create awareness on Energy Efficiency

Creating Awareness on Energy Efficiency among IAU employees and students by sending posters/images via emails (Both in English and Arabic Languages)

لماذا نحث على الترشيد من استهلاك الطاقة؟

- 01 للحفاظ على مصادر الطاقة واستدامتها
- 02 لتقليل الهدر في استهلاك الطاقة
- 03 لزيادة عمر الأجهزة المستهلكة للطاقة
- 04 لأثره على الصحة والبيئة

كما أن الترشيد سلوك لا يمس راحة الموظف وإنما يوقف الهدر من استهلاك الطاقة

Awareness on Energy Consumption

IAU create awareness on energy consumption for public and student community.

https://twitter.com/IAU_KSA/status/1700748157812977976

3. IAU Achievement in Energy Efficiency Consumption

IAU achieves 100% in the Field of Improving Energy Efficiency Consumption 2022

Imam Abdulrahman bin Faisal University obtained 100% in the scorecard for the year 2022 and the excellence award for the first category in the field of improving energy efficiency consumption, during a ceremony honoring distinguished government agencies in improving energy consumption for the year 2022, which was held by the Saudi Center for Energy Efficiency, in the presence of the Vice President for Administrative and Financial Affairs, head of the university's energy efficiency team, Prof. Dr. Abdulwahed Al-Mazrou, and many officials and representatives of government agencies. The university's win came for achieving 100% in the scorecard, which includes achieving levels of commitment in energy consumption after implementing a set of internal initiatives to improve energy consumption rates in all university facilities and buildings and university hospitals, including the application of the necessary standards to raise the efficiency of consumption, the adoption of the necessary models and guidelines, and the holding of technical workshops.

<https://www.iau.edu.sa/en/news/iau-achieves-100-in-the-field-of-improving-energy-efficiency-consumption-2022>

4. Energy Efficiency Appliances Usage at IAU

Automatic Motion Sensor installed in all IAU buildings to reduce electricity consumption

IAU Advertisement : Reminder to Turn off the AC to conserve Energy

Energy Efficient Appliances Usage in all the Buildings of IAU: Use of LED & fluorescent lighting and lamps with central clock system, centralized speaker & LCD Announcement screen

Energy Efficient Appliances Usage in all the Buildings of IAU:
Use of LED & fluorescent lighting and lamps with auto shut-off sensors. Central clock system, centralized speaker & LCD Announcement screen in each building.

OUTDOOR SIGNAGE IN C1-EAST CAMPUS

Example of Energy Efficient Appliances Usage: Solar energy for map direction and board and light outside

EXAMPLES OF SIGNAGE & SOLAR LIGHTS IN IAU CAMPUS

(Precast Concrete insulated panels and Curtain wall) Administration Building- IAU

IAU implement and abide by Saudi Building Code in its all Construction and Electricity plan

5. Climate Action Initiatives - Production and Consumption of Renewable Energy at IAU Campus

Sustainable measures taken across the campus by installing Solar panels to reduce the electricity consumption thereby promoting less carbon foot print.

Solar Panel as substitute to conventional electricity installed in the campus as part to reducing Greenhouse gas emission

Solar Panel as substitute to conventional electricity installed in the campus as part to reducing Greenhouse gas emission

Solar Plants at IAU Open Spaces for Renewable Energy

Solar Panel as substitute to conventional electricity installed in the campus as part to reducing Greenhouse gas emission

Solar Panels spread at IAU Campuses

Solar Panels installed all over the campus to provide energy for the purposes of lighting, heating, cooling, running university laboratories, etc.

6. Solar panels Project approval by IAU

الإدارة العامة للمنشآت - General Administration of Facilities

﴿قرار إداري﴾

- * إن المستشار للشؤون الفنية المشرف العام على الإدارة العامة للمنشآت المكلف
- * بناءً على الصلاحيات المخولة له نظاماً
- * وبعد الاطلاع على محضر بدء مشروع تركيب الألواح الشمسية لمباني الجامعة مع الشركة الوطنية لخدمات كفاءة الطاقة.
- * وبناءً على ما تقتضيه مصلحة العمل .

﴿يقرر ما يلي﴾

أولاً : تشكيل لجنة فنية برئاسة المهندس/ كاظم آل يوسف . وعضوية:-

- ١- الدكتور / محسن حامد .
- ٢- الفني / المهندس / محمد حامد إبراهيم .
- ٣- المهندس/عبدالمعزم العطالي .

وذلك للإشراف على تنفيذ أعمال المشروع وتسهيل مهمة الشركة ورفع التقارير حول ما يتم من أعمال المشروع .

ثانياً : اللجنة الحق بالاستعانة بمن تراه .

ثالثاً : على جميع الجهات المعنية تنفيذ قرارنا هذا كل فيما يخصه .

وإنه الموافق ٤٤٤

المستشار للشؤون الفنية

7. Climate action initiatives - Reducing Carbon footprint through Shuttles and E-scooters

Introduction of Shuttles and E-bikes greatly reduced the carbon footprint emitted from the vehicles. IAU is concerned about the Environmental health and promotes the staff and students to use Shuttle services instead of coming to the University in personal vehicles.

Shuttle Bus Services for Students and Faculty at IAU

Shuttle Buses at IAU

Shuttle Bus Fleets at IAU

Club Car (E-cart) Facility at IAU to reduce CO2 emission

E-cart available for Commutation inside IAU

E-Scooter Initiative by IAU to reduce CO2 Emission

An initiative IAU GREEN without CO2, inaugurated by H.E. the President of IAU

E-Scooter initiative in IAU, in an effort to reduce Greenhouse gas emission

E-Scooters on rent for Staff & students, an initiative by IAU, to reduce Greenhouse gas emission

DAMMAM — Dr. Abdullah Al-Rubaish, president of Imam Abdulrahman Bin Faisal University, Dammam, launched the Smart Mobility initiative at the lobby of the College of Architecture and Planning on the university campus here on Wednesday.

The initiative, which was commissioned by the Deanship of Community Service and Sustainable Development, comes as part of using clean energy within the university campus and make available its health benefits to the members of the campus community.

Dr. Al-Rubaish said that the university launched the pilot phase of the smart mobility service so as to achieve the Kingdom's Vision 2030 towards providing new opportunities for transportation.

"This is through generating clean energy within the university campus by bicycles and e-scooters with the WAYZ application, which will facilitate for its users the rapid mobility feature at the university through an electronic mobile application," he added.

For her part, Dr. Fatima Bint Abdullah Al-Mulhim, head of the Deanship of Community Service and Sustainable Development, said that the new experiment is based on using clean energy for the mobility inside the university campus.

"We launched earlier the initiative of 'Green University without Carbon,' under which these scooters, which are charged and operated with solar energy will be used. It is a service available to all educational and administrative staffers of the university as well as to male and female students," she said.

She noted that it has many health benefits, including the fight against obesity and the promotion of being environmentally friendly and serving the members of society with its environment.

According to Dr. Fatima, the goal is also to be sustainable through the presence of solar-powered stations.

"Today is the beginning of an experimental start and work is continuing in order to equip stations to charge these devices powered by solar energy.

"All the university people, including male and female students, administrators and members of the educational staff, as well as university security personnel, will benefit from this service.

This will facilitate their freedom of movement without cars, and the initiative received a lot of encouragement and demand," she said while noting that safe corridors have been provided inside the university campus.

"This is one of our priorities to ensure the safety of the beneficiaries of this service, and it will be included in the first stage inside the university campus until the infrastructure and private roads are provided at the university for this type of initiative that is reflected in reducing the proportion of carbon.

"Now we are in the process of working with faculty members who obtained a patent in measuring carbon levels in the atmosphere, and we aim for the measurements and they will be returned according to the research scheme prepared for that," she added.

8. Climate action initiatives – Planting more Trees at IAU

Let's Make Green campaign by IAU

Participation of female students of the Environmental Engineering Department of College of Engineering, Imam Abdulrahman Bin Faisal University, in the “Let's Make Green campaign” launched by the National Center for Vegetation Cover Development and Combating Desertification by planting 6,000 mangrove seedlings on the shores of the Arabian Gulf in Qatif Governorate.

13. Green Building Implementation at IAU

Elements of Green Building Implementation as Reflected in All Construction and Renovation Policies

All buildings of the IAU Campus fulfil the requirements of the Saudi Building Code National Standard for construction of buildings, whereby many of our building follow the international building standard code, which is of much higher standard.

As stated in Saudi Building Code that "all facilities in general require availability of building code that determines safety and security terms as well as comfort in all building stages and the issue increases in its significance in the Kingdom of Saudi Arabia due to its geographical nature and difference in climates of its regions. The desert climate is dry on the interior parts and of high humidity on the areas near the sea as well as it is distinguished by high temperature in most the year seasons and its soil that contains high percentage of detrimental salts in addition to presence of earthquake phenomena in some coastal areas- all these factors and others affect clearly safety of facilities and their sustainment and protection of citizens."

As far as Green Building implementation is concern, one of the steps IAU had started implemented that is the cultivation of invented nono - plants in IAU as a tool for removal of air pollutants.

In addition, all irrigation System in Imam Abdulrahman Bin Faisal University (IAU) is connected and treated with wastewater.

Natural Ventilation in the class room and office corridors
