### Developing a Sustainable Water Conservation Strategy for Saudi Arabian Cities

Abdulaziz I. Almulhim<sup>\*1</sup>, & Ismaila Rimi Abubakar<sup>2</sup>

<sup>1</sup> Department of Urban and Regional Planning, College of Architecture and Planning, Imam Abdulrahman Bin Faisal University, Dammam 31451, Saudi Arabia. [aialmulhim@iau.edu.sa](mailto:aialmulhim@iau.edu.sa)

<sup>2</sup> College of Architecture and Planning, Imam Abdulrahman Bin Faisal University, P.O. Box 1982, Dammam 31441, Saudi Arabia. [irabubakar@iau.edu.sa](mailto:irabubakar@iau.edu.sa)

**Highlights**

- Water scarcity and unsustainable water management practices in Saudi Arabia are studied.
- The study evaluates the sustainability of water management practices in Jubail Industrial City
- It employs mixed-method approach: literature review, case studies, and document analysis.
- It proposes water conservation strategy: demand management, water efficiency, governance framework.
- Water conservation, optimization and reuse are significantly relevant to industry settings

## Research Groups on Wastewater at IAU

The screenshot shows the IAU website interface. At the top, there is a search bar and a navigation menu with items like 'About Us', 'Study with Us', 'Colleges', 'Research', 'Community Service', 'Campuses', 'Sustainability', 'Administration', 'University Hospitals', and 'Open Data'. The breadcrumb trail indicates the path: Home / Colleges / College of Engineering / Departments / Environmental Engineering Department / Research Groups. The main content area is titled 'Research Groups' and features a sidebar menu for the 'College of Engineering' with options like 'About', 'Dean's Message', 'Vice Deanships', and 'Departments'. Under 'Departments', 'Environmental Engineering' is selected. The main content area lists two research groups: 'Air Quality' and 'Water and Wastewater'. The 'Water and Wastewater' group has an 'Overview' section stating: 'Water and wastewater research group exerting continuous efforts in the areas of water and wastewater treatment. The main focus area include:'.

### 3. Water Research Community Initiative

#### Imam Abdulrahman bin Faisal University (IAU) Participation in the fifth edition of the Water Research Community Initiative organized by the Saudi Water Authority.

We are proud of the participation of the Mechanical and Energy Engineering Department in the fifth edition of the **Water Research Community Initiative** organized by the Saudi Water Authority, through the presentation of two research papers and the participation of the department head, Dr. Mosaed Al-Zahrani, as a speaker in one of the dialogue sessions.

[https://x.com/CE\\_IAU\\_SA/status/1968561503134437880](https://x.com/CE_IAU_SA/status/1968561503134437880)

## 4. Marine Engineering organized a field visit

**Marine Engineering Students of IAU had a Field Visit to the Zamil Shipbuilding and Repair Company organized by the Saudi Water Authority.**

The Department of Marine Engineering organized a field visit for the first cohort students to Zamil Shipbuilding and Repair Company, where the students were introduced to the various fields of work in the shipbuilding industry, as a step aimed at enhancing the practical aspect and preparing them for the job market.

## 5. Water pollution control

**Water Pollution control system at IAU**

**Recycled water processed in the tanks to protect ground water contamination**

## 6. Periodic Inspection and Repairs

**Water pipes Repairs for preventing leakages and water pollution at IAU**

## 7. IAU offered Water related courses to Student Community

جامعة الإمام عبد الرحمن بن فيصل  
IMAM ABDULRAHMAN BIN FAISAL UNIVERSITY

Q

Home / Water Quality & Sanitation

### Water Quality & Sanitation

**Course Description**

- General introduction.
- Water as an environmental community of micro-organisms .
- Distribution of micro-organisms in aquatic environments including (terrestrial, ophthalmic, rivers, natural and industrial lakes and sediments) .
- Factors influencing the growth and distribution of micro-organisms in different aquatic ecology microorganisms and water pollution .
- Microbial flora for wastewater.
- Micro-organisms in water and wastewater .
- Wastewater treatment methods .
- Role of micro-organisms in water purification.
- Methods of preparing drinking water and wastewater and other human uses.
- Methods of judging the validity of water for human use.

**Practical content**

field visits and sampling, physicochemical analysis of wastewater, chlorine residual , pH, turbidity, color, test and odor, conductivity, microbial analysis of wastewater and principal analytical techniques, analytical quality assurance and quality control

Home / Ground Water Engineering and Contamination

### Ground Water Engineering and Contamination

**Course Description**

This course will give a broad background of the area of ground water engineering and contamination and the following topics will be presented to the students: sources and types of groundwater contamination, contamination transport mechanisms, sorption and other chemical reactions, the numerical modeling of contaminant transport, non-aqueous phase liquids, groundwater remediation and design and basic definitions of terms used in this area of expertise. The students will also become knowledgeable in the following subjects: occurrence of ground water, ground water exploration, specifications, estimations of quantities, types of ground water aquifers, basic studies and investigations, ground water flow, hydraulics of ground water, well hydraulics, estimation of well discharges, observation wells, well design, well development, ground water quality as well as contaminant, transport management and remediation. The students will receive an introduction to ground water modeling and become familiar with the state of ground water in the Kingdom.

## Geography of Water

Course ID: GEOG 481

Credit hours	Theory	Practical	Laboratory	Lecture	Studio	Contact hours	Pre-requisite
3	3					3	-

## Hydrogeography

**Course Main Objective**

Learn about how water exists in nature and its importance in dry environments through learning about its limited resources and problems a matter which helps form positive trends towards these problems and reduce water loss; realize role played by the Kingdom to develop the available resources and provide other unconventional resources.

**Course Learning Outcomes**

- 1. Knowledge and Comprehension
- 1.1 Identify the relation between hydrogeography and other sciences and the hydrologic cycle and the various resources of water and how to preserve.
- 2. Skills
- 2.1 Prove their knowledge of the human factors affecting water use and how to preserve it.
- 2.2 Use computer technology, the statistical programs to perform some group and individual works.
- 3. Values
- 3.1 Appreciate teamwork and community responsibility.

**Course Content:**

- First topic: an introduction to geography of water resources- amount of water and the hydrologic cycle.
- Second topic: precipitation (types, analysis, distribution).
- Third topic: full management of water under the sustainable development.
- Fourth topic: water in the Arab world in general and the international water conflicts.
- Fifth topic: water resources in Kingdom of Saudi Arabia.

**Textbook (s)**

- Al-Zouka, Muhammad.Kh. (2015). Hydrogeography. Dar Almarefa, Alexandria.
- Jouda, Fathy.A. (2005). Geography of Water Resources: A Contemporary Study in Basics and Application. 1sted. Saudi House for Publishing, Riyadh.

Home / Waste Containment Structures

## Waste Containment Structures

**Course Description**

Characteristics of solid waste and management, introduction to landfill techniques, classifications and basic functions of design materials, construction and management of safe and economic sanitary landfills, equipment and site planning for landfills are some of the topics for this course. Reduce, reuse and recycle, sanitary landfill, leachate and site planning for landfills will also be a part of this class.

## Industrial Wastes Management

### Course Description

This course will cover the different types of industrial wastes, the origin of wastes process wise and their impact on human and environmental health. Different industrial wastes in plant control measures; evaluation, treatment facilities (physical, chemical, and biological) and management will also be presented.

## Marine Pollution and Control

### Course Description

The present health of the Red Sea and Arabian Gulf will be studied along with the need for controlling pollution in these waters. The anthropogenic effects on estuarine and marine ecosystems from local, regional and global perspectives will be covered, along with the types of contaminants, pollutants, eutrophication, oxygen demanding waste, oil pollution and toxicity, polycyclic aromatic hydrocarbons (PAH), halogenated hydrocarbons, trace metals, radioactive waste, dredging and dredged-spoil disposal as well as the effects of electric generating stations. Global, regional and national marine pollution control activities will be reviewed along with selected case studies.

Water and Wastewater ☰

**Overview**

Water and wastewater research group exerting continuous efforts in the areas of water and wastewater treatment.

The main focus area include:

- Water and wastewater quality monitoring
- Sustainable innovative adsorbents for water purification
- Solar disinfection
- Photodegradation of polyaromatics and pharmaceutical contaminants
- Biodegradation of organic pollutants
- Sewage sludge treatment
- Bio based membranes for desalination

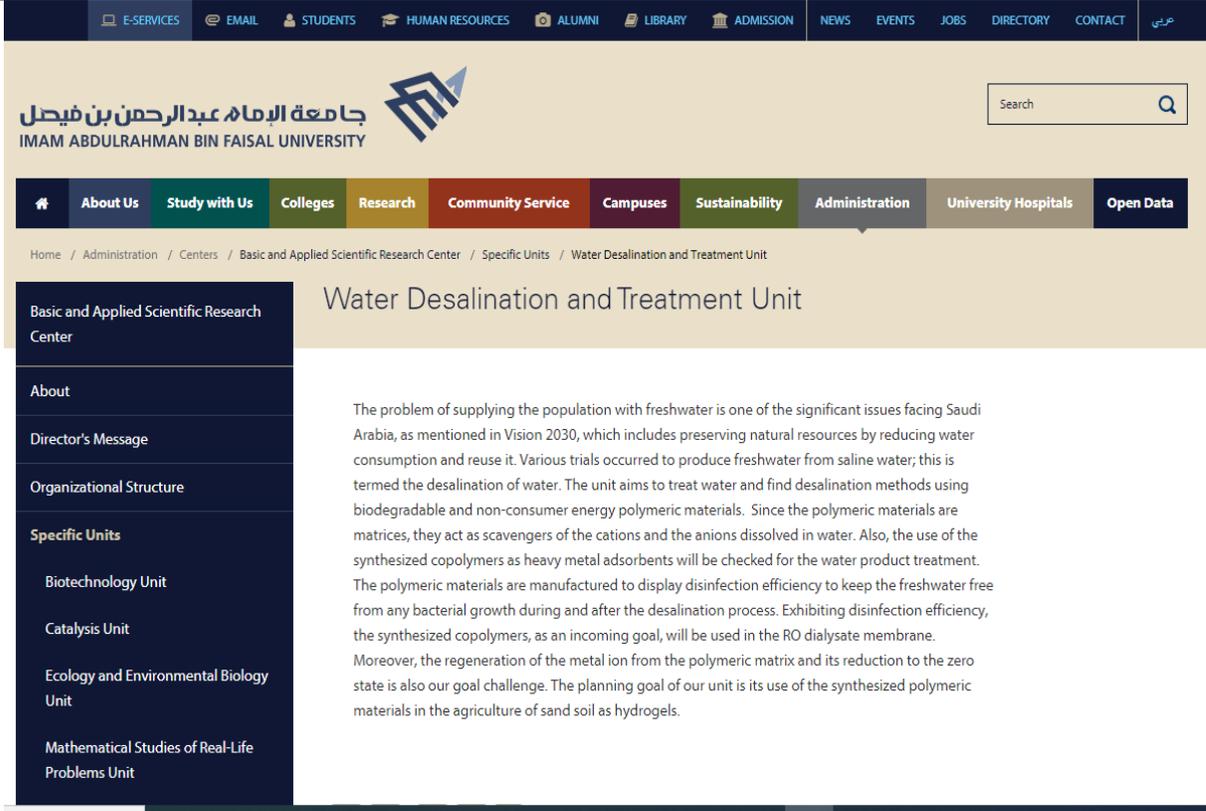

**Objectives**

To develop, design and implement sustainable solutions for solving global water and wastewater pollution control and treatment problems.

## 9. Water Desalination and Treatment Unit of IAU

The problem of supplying the population with freshwater is one of the significant issues facing Saudi Arabia, as mentioned in Vision 2030, which includes preserving natural resources by reducing water consumption and reuse it. Various trials occurred to produce freshwater from saline water; this is termed the desalination of water. The unit aims to treat water and find desalination methods using biodegradable and non-consumer energy polymeric materials. Since the polymeric materials are matrices, they act as scavengers of the cations and the anions dissolved in water. Also, the use of the synthesized copolymers as heavy metal adsorbents will be checked for the water product treatment. The polymeric materials are manufactured to display disinfection efficiency to keep the freshwater free from any bacterial growth during and after the desalination process. Exhibiting disinfection efficiency, the synthesized copolymers, as an incoming goal, will be used in the RO dialysate membrane. Moreover, the regeneration of the metal ion from the polymeric matrix and its reduction to the zero state is also our goal challenge. The planning goal of our unit is its use of the synthesized polymeric materials in the agriculture of sand soil as hydrogels.

### Water Desalination and Treatment Unit

The problem of supplying the population with freshwater is one of the significant issues facing Saudi Arabia, as mentioned in Vision 2030, which includes preserving natural resources by reducing water consumption and reuse it. Various trials occurred to produce freshwater from saline water; this is termed the desalination of water. The unit aims to treat water and find desalination methods using biodegradable and non-consumer energy polymeric materials.
